

Canary Wharf Residential Project

Project Details

Location: London

Product: UNITY Aluminium Rainscreen Panels

Finishes: PPC in stone texture

Rainscreen cladding specialists Metalline are the first to use an innovative stone textured finish on their range of CWCT certified UNITY rainscreen cladding panels. The finish, which to the naked eye looks like stone is a perfect substitute for natural stone cladding panels and offers a range of cost saving benefits. The use of aluminum also offers the architect more design options. Presenting this finish allowed Metalline to outline the huge cost savings that could be achieved by specifying their aluminium UNITY rainscreen panel with the new stone textured PPC applied.
