

## Project Details

**Location:** Birmingham

**Products:** ULTIMA Insulated Spandrel Panels, UNITY Aluminium Rainscreen Panels

**Finishes:** Black polyester powder coating

The HMRC regional hub at the Arena Central complex in Birmingham has provided over 240,000 sqft of grade A commercial space over its ground and 13 upper floors. The building features an external envelope of geometric glass and aluminium facades that create an iconic feature to this area of central Birmingham. The detailed design of the building's façade demanded a uniformity of colours which was achieved using a single ingot of J57S Up aluminium. The ULTIMA Insulated Spandrel Panels were finished in a black polyester powder coating. The individual UNITY rainscreen panels were supplied in a two – tone specialist 1934 and 1953 Unatex silver anodised finish.
