

Central Park, Brighton

Project Details

Location: Brighton

Products: UNITY DF Panels

Finishes: Brushed Anodised Finish

One of Metalline's recent projects is the Central Park development in Brighton, where UNITY DF panels with a brushed anodised finish were supplied and installed by FILL UK. Chosen for their strength, fire resistance and proven performance, the panels deliver a façade suited to modern building requirements. UNITY DF is a discrete-fix rainscreen cassette system, available in landscape and portrait formats, with recessed colour-matched fixings for a clean finish.

The fully non-combustible system includes A1-rated anodised and pre-coated aluminium panels, and A2-s1, d0 powder-coated options. All panels are independently tested for impact, wind and water resistance. Supported by CLAD-LINE CL1 or the Floor 2 Floor Framing System, UNITY DF is suitable for both new-build and refurbishment projects.

At Central Park, key challenges included matching the existing façade and maintaining panel stability. Metalline collaborated with FILL UK and United Anodisers to develop the bespoke brushed finish, using multiple samples for approval. Stud-welded stiffeners and 3D CAD modelling ensured accurate installation and long-term reliability.
